# DANIEL ALEJANDRO PÁEZ TORRES

**Data Analyst / Analytics Engineer | Python, SQL, Power BI, PostgreSQL | Automation and Applied AI**

Bogotá, Colombia | dapt.torres@gmail.com | linkedin.com/in/daniel-paez-torres | github.com/nieldro

## PROFESSIONAL SUMMARY

Data analyst and analytics engineer with 3 years of experience building ELT pipelines in Python, dimensional models in PostgreSQL and Power BI dashboards that run the operations of six business lines. I integrate sources with no common API (Odoo, third-party MySQL databases, Google Sheets) into a centralized model on Google Cloud, automate their execution with systemd and n8n, and apply generative AI (Azure OpenAI, LangChain) to real data. I go after root causes: I fixed a KPI inflated 2.5x and found the filter that consumed 92% of a dashboard's runtime. I document every process for maintainability. English B1 (intermediate). Available for remote or hybrid work.

## TECHNICAL SKILLS

**Data engineering:** ETL/ELT, data pipelines, orchestration (systemd, Azure Data Factory, n8n), data quality and validation, idempotency (unique indexes, advisory locks), dimensional modeling (star schema), data warehouse, API integration (XML-RPC, REST, Google Sheets API) and SSH tunneling

**Languages and analysis:** Python (Pandas, NumPy, Selenium), SQL, T-SQL, DAX, Power Query (M), regular expressions (regex), JavaScript

**Databases and cloud:** PostgreSQL (Google Cloud SQL), SQL Server, Azure SQL, MySQL, CTEs, stored procedures, index optimization; Google Cloud (Cloud SQL, Compute Engine), Azure Data Factory, AWS S3 and Athena, Linux (systemd, nginx)

**Business intelligence:** Power BI (semantic model, star schema, RLS, DAX, scheduled refresh, Power BI REST API), Looker Studio, Tableau (basic)

**Applied AI and automation:** Azure OpenAI, LangChain, Prompt Flow (chatbots over real data), n8n, Power Automate, Power Apps, prompt engineering, AI-assisted development (GitHub Copilot, Claude Code)

**Development:** FastAPI (REST APIs), React, JavaScript, TypeScript, Next.js, automated testing (pytest), Git, GitHub, GitLab, Jupyter

**Languages spoken:** Spanish (native). English B1 (intermediate).

## PROFESSIONAL EXPERIENCE

**Information Analyst**

VISE | Bogotá, Colombia | 07/2026 - Present

- Build and maintain ELT processes in Python (Pandas) that consolidate Odoo, field-supervision platforms, third-party MySQL databases and Google Sheets into a centralized PostgreSQL model on Google Cloud SQL, running unattended every day on Linux (systemd) with retries and email alerts.
- Develop and maintain the Power BI dashboards for six operating lines, with dimensional modeling, RLS and automatic refresh; I gather requirements directly from business teams and publish and refresh models through the Power BI API.
- Migrated two client dashboards from Looker Studio to Power BI, deducing the calculation rules and validating every KPI against the original.
- Integrate systems with no common API: Odoo via XML-RPC, third-party MySQL databases through an SSH tunnel and the Google Sheets API with service accounts.
- Documented the data model (dictionary of more than 1,000 columns, load processes and views) in an internal web portal with authentication, built with React and its own backend.
- Fixed a duplication in the compliance KPI by redefining the true fact key and adding a unique index with an advisory lock: the reported figure was inflated 2.5x.
- Raised automatic job-site matching in an operational report from 56% to 73% by scoping per client and normalizing text without altering numeric identifiers.
- Cut a dashboard's response time by profiling its queries and finding that one common filter consumed 92% of the execution time of every view.

**Data and BI Analyst**

Supernumerarios SAS | Bogotá, Colombia | 05/2025 - 05/2026

- Designed ETL pipelines with Python and Azure Data Factory integrating on-premise and cloud sources, with automatic validation and error logs.
- Built a chatbot with Azure OpenAI connected to real data to answer customer questions: LangChain chains the prompt with the query and Prompt Flow was used to design and test the flow before production.
- Built executive Power BI dashboards with star-schema modeling, DAX and RLS, adopted by management.

- Cut critical report times by 40% by optimizing queries with CTEs, stored procedures and indexes.
- Unified AWS (S3, Athena) and Azure sources into a single reporting model.
- Digitized internal data capture with Power Apps and Power Automate, eliminating operational errors in key processes.

**Data Analyst and Developer**

SLB Pes Colombia | Bogotá, Colombia | 11/2024 - 04/2025

- Modeled operational data in SQL Server and improved the runtime of critical queries through index optimization and CTE refactoring.
- Ran ETL pipelines with data-quality validation, documenting each process for maintenance.
- Designed Power BI dashboards with automatic KPI refresh and threshold alerts for managers.
- Ensured referential integrity and consistency in data flows between the backend and relational databases.

**Web Master and Data Analyst**

Mueblimaquinas | Bogotá, Colombia | 10/2023 - 10/2024

- Automated reporting pipelines with Python (Pandas, openpyxl), cutting manual generation time by 60%.
- Integrated ERP, CRM and Excel sources with Power BI dashboards to support strategic decisions.
- Analyzed web traffic and user behavior with Google Analytics and SQL to optimize campaigns.
- Built and maintained the corporate website with version control and deployment.

## SELECTED PROJECTS

**Personal portfolio with its own backend**

Next.js, TypeScript, FastAPI, PostgreSQL | 2026 | github.com/nieldro/RUIDO

- Site with its own API: anonymous real-time visits and scroll depth (SSE), GitHub API integration with a signed webhook (HMAC) and a quote form that stores the lead and notifies through a webhook.
- 86 automated backend tests; Lighthouse: accessibility 100 and desktop performance close to 90.

**Freelance Data Analyst - Marketeros**

2-month project | 03/2025 - 05/2025

- Built frontend components in React and JavaScript for campaign tracking panels.
- Joined Google Analytics data with SQL to measure ROI and traffic trends by channel; built Looker Studio dashboards.

**E-Commerce Analytics Dashboard, End to End**

Power BI, SQL Server, Azure SQL, DAX | 2024

- Complete solution with SQL cleaning, star-schema modeling and 13 KPIs with drill-through in Power BI.

**Automated PDF Invoice Extractor**

Python, regex, pdfplumber, openpyxl | 2024

- Desktop application that extracts structured data from PDF invoices and exports it to formatted Excel, removing manual data entry.

## EDUCATION

- B.Sc. in Systems Engineering (in progress, final semesters) - Universidad Central, Bogotá
- Technologist in Software Analysis and Development (ADSI) - SENA, 2023

## CERTIFICATIONS

- Google Data Analytics Certificate - Coursera / Google, 2025
- Microsoft PL-300 (Power BI) and AWS CLF-C02 - in preparation
